For 40 years, Pro-Line Boats has designed boats for family boaters to serious anglers with a dedication to quality, craftsmanship and functionality. This includes Pro-line's mold-making process, recently upgraded to use CCP's tooling system of Polycor® 945 tooling gel, ArmorGuard™ 967 barrier coat, ArmorStar® VSXH skin coat and OptiPLUS® low shrink bulking resin.

“The results have been tremendous,” said Pro-Line President John E. Walker. “The CCP tooling system was introduced to us in early 2007 and has delivered high-quality molds, while saving us significant time.”

For more information on the CCP Tooling System contact Rick Pauer at pauer@ccponline.com.
